(54) PRINT SERVER SYSTEM

(57)Abstract:
PROBLEM TO BE SOLVED: To provide a print server system where the setting and the management of the IP address of a printer are facilitated in the print server system where a host computer is connected to the printer via a server.
SOLUTION: The server 100 dynamically gives an IP address to the started printer 110 and registers the printer 110 as a shared printer. When the printer 110 acquiring the IP address does not update the acquirement of the IP address, the server 100 releases registration as the shared printer of the printer 110. The printer 110 returns the IP address to the server 100 as soon as a printing processing terminates.
